

## PCK433.2, PCK433.4 Penda instruction

[www.mkey.com.au](http://www.mkey.com.au)

The PentaCode® dual coding system gives the installer the option to use the classic 12-way dip switch coding or one of over 17 billion encrypted codes.

If indicated led on existing remote is **blue** that is with the 12-way dip switch, just match the keyring remotes and the receiver's dip switch and it's coded. No need for programmers, memory chips or computer databases to store the code.

If indicated led on existing remote is **red** that is with the encrypted code you switch all the 12- way dip switches OFF and the remote automatically goes into the encrypted coding. Just press the Program button on the receiver and meantime press a button of new remote two seconds. That's all. It's ready to use.
